

VERISEQ® pharmaceutical grade gases. Oxygen.

VERISEQ® pharmaceutical grade gases

With VERISEQ® gases from Linde, the pharmaceutical industry is able to obtain gases that conform to agreed and internationally harmonised specifications from an approved supplier. Such pharmaceutical grade products are delivered in accordance with applicable pharmacopoeia monographs.

To be approved by the United States (US) Food and Drug Administration (FDA) as a manufacturer of active pharmaceutical ingredients (APIs) or pharmaceutical drug products, full compliance with current Good Manufacturing Practice (cGMP) should be assured.

With gases used in pharmaceutical production, producers need to fulfil the requirements of US FDA Title 21 Code of Federal Regulations (CFR) Parts 210 and 211 in order to assure batch uniformity and integrity of the drug product. API manufacturers should comply with ICH guideline Q7 (harmonised GMP guide created by the International Conference on Harmonisation (ICH), adopted throughout the European Union (EU), Japan and the USA). This includes requirements for the verification and documentation of purchased products as well as the necessity for material to be purchased in compliance with agreed specifications.

VERISEQ® Oxygen

VERISEQ® Oxygen helps the pharmaceutical industry to fulfil its requirements and to reach compliance with cGMP, as the gas is traceable back to product storage. VERISEQ® Oxygen is produced according to documented manufacturing procedures, with any impurities and contaminants identified by qualified analytical equipment, reported. The specification fulfils the requirements of the European and US pharmacopoeia monographs. The analysis methods are in accordance with the same monographs or equivalent validated methods.

Certification

The Certificate of conformity states the specified quality of the gas. The specification is guaranteed based on regular storage tank analyses. The Certificate of analysis states the results and the acceptance limits of the specific analyses performed on a sample from the helium batch before delivery. The information found in the certificate ensures total traceability and conformity to the pharmacopoeias.

Supply options

Linde offers VERISEQ® Oxygen as packaged and bulk delivery options. VERISEQ® Process Oxygen fulfils the analytical and monograph requirements of the European and US Pharmacopoeias.

Specification

VERISEQ® Oxygen is based on and fulfils the requirements of the following current pharmacopoeia monographs:

- → Oxygen, EP
- → Oxygen, USP/NF

			Linde specifications	Pharmacopoeia monographs	
Component	Chemical	Unit	VERISEQ®	EP	USP/NF
	formula		Process Oxygen1)		
Oxygen	02	0/0	≥ 99.5	≥ 99.5	≥ 99.0
Water	H ₂ 0	ppm	≤ 67	≤ 67	
Carbon monoxide	CO	ppm	≤ 5	≤ 5	≤ 10 ²⁾
Carbon dioxide	CO ₂	ppm	≤ 300	≤ 300	≤ 300 ²⁾
Odour			n.d. ³⁾		n.d. ³⁾

- 1) The Linde product specification is updated when the specifications in the pharmacopoeia monographs are changed
- 2) Oxygen that is produced by the air-liquefaction process is exempt from the requirements of the tests for carbon dioxide and carbon monoxide
- 3) n.d. = not detectable

General information

Gas type	Boiling point ⁴⁾	Heat of Vaporization ⁴⁾	Specific heat capacity (15 °C)
Oxygen	-182.98 °C	213.3 kJ/kg	0.196 kJ/kg K

4) at 101.3 kPa

Critical values

Critical temperature	Critical pressure	Critical density
-118.57 °C	50.430 bar	0.436 kg/l

Conversion gas-liquid-mass

1 Nm³ gaseous O ₂ 5)	= 1.19 litre liquid He	= 1.36 kg O ₂	
1 litre liquid O ₂	= $0.842 \text{ Nm}^3 \text{ gaseous } O_2$	= 1.14 kg O ₂	
1 kg O ₂	= $0.738 \text{ Nm}^3 \text{ gaseous } O_2$	= 0.876 litre liquid O_2	

5) $1 \text{ Nm}^3 = 1 \text{ m}^3 \text{ at } 15 \text{ °C}, 101.3 \text{ kPa}$
