

## R236fa (Freon™). Designed to replace CFC-114.

**Introduction** R236fa is an HFC gas designed to replace CFC-114. It is suitable for use in some low pressure centrifugal chillers, as well as in some heat pump and heat transfer applications.

**Specifics/facts** It is used in applications like low-pressure and existing centrifugal chillers, industrial process refrigeration systems and High-ambient cooling applications (e.g. overhead cranes).

### Product specification

Cylinder size in litres	Content in kg	Item number
12	14	117347
61	73	On request

[Other packagesize please ask Linde](#)

- Advantages**
- Zero ozone depletion potential (ODP)
  - Extended life of R114 chillers
  - An ASHRAE A1 safety classification
