

Product data sheet.

Liquid Nitrogen, High Tech.

Application This quality is principally used in connection with high-quality production of electronics, microelectronics, optical fibres, high-purity chemical production plus for laboratory purposes.

Physical properties Liquid Nitrogen is a colourless and odourless liquid, which is lighter than water. As a gas it is colourless-tasteless as well as odourless. Nitrogen is neither inflammable in itself, nor will the substance nourish fire. Atmospheric air contains 79.09 vol. % nitrogen and nitrogen gas is a little lighter than air. Nitrogen is easier soluble in water. Nitrogen is inert, except at high temperatures, where it reacts with few active metals, e.g. lithium, magnesium and titanium, and forms nitrides. It creates nitric oxide and nitrogen dioxide in reaction with oxygen, ammonia with hydrogen and nitrogen sulphide with sulphur. Liquid nitrogen is produced from air via distillation in an air-separation-system.

Specification

Material No.	105327
Product name:	Liquid Nitrogen, High Tech

Purity

Nitrogen (N ₂ incl. Ar)	≥ 99,999 vol. %
------------------------------------	-----------------

Impurities

Oxygen (O ₂)	≤ 3 ppm
--------------------------	---------

Water (H ₂ O)	≤ 3 ppm
--------------------------	---------

Carbon monoxide (CO)	≤ 1 ppm
----------------------	---------

Carbon dioxide (CO ₂)	≤ 2 ppm
-----------------------------------	---------

Hydro-carbon (C _n H _m)	≤ 1 ppm
---	---------

The specifications are exclusively valid for deliveries in pressure tanks.

Physical data

Gas type	Boiling Point	Latent heat of vaporization	Specific Heat Capacity (15° C)
Nitrogen, N ₂ , LIN	-196° C	198 kJ/kg	1,04 kJ/kg K

Conversion Factors

1 nm³ = 1,419 litre = 1,148 kg

1 litre = 0,705 nm³ = 0,808 kg

1 kg = 0,872 nm³ = 1,237 litre

1 nm³ = 1 m³ at 15° C and 0,98 KPa.

Critical Values

Critical Temperature -147,1° C

Critical pressure 33,9 bar

Critical Density 0,311 kg/l

The litre-designation is used for gas in its liquid phase.
